

About John Such Jr.

I have always been drawn to the space between what was, what is, and what could be.

That probably sounds bigger than it needs to, but it is the truth. I love history because it reminds us that people have always been figuring things out as they go. I love technology because it gives us new tools to solve old problems. I love AI because it feels like we are standing at the edge of something huge, and most people are still trying to decide whether it is a tool, a threat, a toy, or a doorway.

I think it is probably all of those things.

My name is John Such Jr., and this site is a little bit of a digital campfire for the things I care about. Technology. Marketing. Artificial intelligence. Creativity. Gaming. Storytelling. History. Family. Business ideas. Big questions. Odd rabbit holes. A good Renaissance faire. The future of work. The old wisdom we keep forgetting. The new tools we are still learning how to hold correctly.

I am a marketing manager by trade, but I have never been great at staying in just one lane. My work has mostly lived at the intersection of technology, business, and communication. I spend a lot of time thinking about how companies explain complicated things in a way normal people can actually understand, care about, and act on. That matters more than people think. A great product can get ignored if the story is weak. A simple idea can become powerful if it is explained at the right time, to the right people, in the right way.

A lot of my professional world lives inside the technology channel, where vendors, distributors, resellers, solution providers, and customers all connect in this giant ecosystem that most people never see. It is not always flashy, but it is the plumbing behind a lot of what keeps modern business moving. Over time, I have learned to appreciate the machinery behind the curtain. Not just the technology itself, but the people trying to make it useful.

That is where I tend to focus.

I am not interested in technology for technology's sake. I am interested in what it can unlock. Can it help a small business look bigger than it is? Can it help a team do more with less? Can it take the repetitive junk off someone's plate so they can think again? Can it help a person build something that used to require a whole department, a giant budget, or permission from someone else?

That is the part that gets me fired up.

AI, especially, feels like one of those rare moments where the ground shifts under everybody at the same time. Some people are terrified of it. Some people are overhyping it. Some people are

using it to make lazy work faster. But the people who really learn how to use it, not as a magic button, but as a thinking partner, are going to create things that would have been impossible a few years ago.

That is what I am chasing.

Not shortcuts. Leverage.

I like the idea of regular people gaining access to tools that help them build, write, design, analyze, imagine, automate, and compete. I like helping people understand that AI is not just for coders, executives, or tech bros with ring lights and rented Lamborghinis. It is for the marketer trying to build a better campaign. The small business owner trying to stay alive. The parent trying to help their kid learn. The creative person with ten ideas and no production team. The curious person who just wants to see how far an idea can go.

That is probably the thread that runs through most of what I do. I like helping people see the possibility hiding inside the mess.

And I like building things.

Some of those things are professional, like marketing strategies, AI training, business concepts, websites, presentations, and frameworks for how teams can use new tools responsibly. Some are personal, like story worlds, creative projects, 3D printed ideas, weird little business experiments, and the occasional attempt to turn a random spark into something real.

I have a deep love for old things too. Ancient history. Forgotten cultures. Biblical echoes. Tribal stories. Castles. Armor. Swords. Myths. Renaissance fairs. The feeling of walking through a place where people are pretending to be from the past, but somehow everyone feels a little more alive than usual.

There is something funny and beautiful about that.

One minute I am thinking about artificial intelligence, automation, and the future of work. The next minute I am wondering what kind of cloak, boots, or leather bracer would make a man look like he just wandered out of a tavern quest and still has to answer emails Monday morning.

That is me in a nutshell.

Part futurist. Part marketer. Part storyteller. Part history nerd. Part dad. Part builder. Part guy who has too many ideas and not enough hours, but keeps trying anyway.

I do not pretend to have everything figured out. In fact, the older I get, the more I realize wisdom is less about having the answer and more about knowing how to ask better questions. I respect people who are curious, practical, honest, and willing to change their mind when the facts change. I try to be that kind of person, even when I miss the mark.

I believe the future belongs to people who can combine imagination with discipline. People who can dream, but also ship. People who can use technology without worshipping it. People who can move fast without losing their soul. People who can remember that tools are only powerful when they serve something human.

That is why I wanted this site to exist.

Not as a polished shrine to myself. Nobody needs that. More like a home base. A place to collect thoughts, projects, ideas, experiments, lessons learned, and maybe a few strange detours along the way. A place where technology can sit next to history. Where AI can sit next to storytelling. Where business can sit next to creativity. Where practical advice can live beside big questions about where all of this is heading.

I am interested in what is next, but I do not want to forget what came before.

I am excited about the future, but I do not think every new thing is automatically better.

I believe in progress, but I also believe in wisdom.

And if I can help someone think bigger, build smarter, laugh a little, or see a path forward they did not see before, then this site is doing what it is supposed to do.

So welcome to johnsuchjr.com.

Pull up a chair by the fire.

We may talk about AI.

We may talk about marketing.

We may talk about ancient warriors, business ideas, gaming, fatherhood, robots, 3D printing, Renaissance fairs, or why the future feels like it showed up early and forgot to bring instructions.

Either way, I am glad you are here.

Let's see what we can build.
