

Projects

Some people collect stamps. I collect ideas, half-built worlds, websites, experiments, strange little business concepts, and the occasional digital rabbit hole that turns into something real.

This page is a home for the projects I am building, testing, shaping, or helping bring to life. Some are serious. Some are personal. Some are practical. Some started as one random thought and somehow became a domain name, a prototype, or a working site.

That is usually how it goes.

I like building things at the intersection of technology, marketing, community, creativity, AI, games, storytelling, and the future. These projects are not all polished final products. Some are client work. Some are works in progress. Some are early concepts. Some are experiments. But they all represent the same basic idea:

Build it. Learn from it. Make it better. Keep moving.

Show Me Results Only

Website: <https://www.showmeresultsonly.com>

Status: Work in progress

Show Me Results Only is a practical marketing audit concept built for small businesses that need clearer leads, stronger follow-up, and less guessing.

The idea is simple: stop drowning business owners in vague marketing language and show them what actually needs to be fixed first. The site is built around a direct, results-first audit that looks at things like website clarity, Google Business Profile setup, reviews, local visibility, lead capture, follow-up, tracking, and basic marketing leaks.

This is for the business owner who does not want a giant agency pitch. They want someone to look at what they have, tell them where the holes are, and give them a practical path forward.

No fluff. No mystery. Just the stuff that moves the needle.

Panda Dumpsters

Website: <https://www.pandadumpsters.com>

Status: Client site

Panda Dumpsters is a client website built for a local dumpster rental and waste management business.

The goal of the site is to make the business feel professional, trustworthy, easy to understand, and simple to book. Dumpster rental can be a rough, cluttered, and overly basic category online, so the site was built to stand out with a cleaner, more premium feel while still speaking clearly to contractors, homeowners, remodelers, and people who just need a dumpster without a hassle.

The brand direction is practical but polished: driveway-safe, contractor-grade, neighbor-approved.

This project included site structure, messaging, SEO thinking, booking flow support, local service positioning, and a cleaner digital presence that gives the business room to grow.

It is a good example of what I enjoy building: a real-world business site that does not overcomplicate the message, but still feels modern, credible, and ready to compete.

Market Matters Online

Website: <https://www.marketmattersonline.com>

Status: Marketing blog site

Market Matters Online is a marketing blog and content platform built around practical marketing guidance, AI, automation, tool reviews, SEO, local growth, and simple tactics that real businesses can use.

The site is designed for people who want marketing help without the corporate fog machine. The goal is to make modern marketing easier to understand and easier to act on, especially for small business owners, marketers, creators, and teams trying to do more with less.

Topics can range from content planning and Google Business Profile optimization to AI workflows, automation tools, marketing templates, search visibility, and practical growth ideas.

The voice is simple: useful beats fancy.

Market Matters Online gives me a place to turn marketing experience, tool testing, AI experiments, and real-world lessons into content that can help people move forward without needing a full agency, a giant budget, or a dictionary full of buzzwords.

Golden Strip Unite

Website: <https://www.goldenstripunite.com>

Status: Work in progress

Golden Strip Unite is a community platform concept for Simpsonville, Mauldin, Fountain Inn, and the surrounding Golden Strip area.

The goal is to help connect people who want to help with people, families, groups, and organizations that need help. It is built around a simple but powerful idea: good people are everywhere, but good intentions often need a place to land.

Golden Strip Unite is meant to become that place.

The long-term vision is a local helper and need-matching platform where churches, nonprofits, community groups, businesses, and everyday people can see real needs and step in where they can. It is not about replacing existing organizations. It is about making the gaps easier to see and the next step easier to take.

Community support works better when it has structure.

Art's Dominos

Website: <https://ccherosc.github.io/ArtsDominos-v2/>

Status: Live prototype

Art's Dominos is a Cuban Double-Nine domino game inspired by family, culture, strategy, and the kind of table energy that turns a simple game into a memory.

The site includes gameplay options like one-on-one play, team play, Cuban Double-Nine rules, match settings, stats, and leaderboard-style features. It is not just a generic domino game. The heart of it is personal. It has the feeling of something built around heritage, competition, and the old-school joy of sitting around a table and talking a little trash while the tiles hit hard.

This project has room to grow into a polished web game with personality. The magic is in the mix of nostalgia, strategy, and repeat play.

It feels familiar, but it still has plenty of room to become something new.

Angln

Website: <https://www.angln.com>

Status: Concept site

Angln is a fishing-centered concept with a lot of potential directions. At its core, it is about more than fishing.

It is about patience, skill, reading the water, learning from experience, and knowing when to cast.

The name has room to support several ideas, including youth fishing training, outdoor mentorship, fishing content, local events, or even a broader marketing concept built around the discipline of fishing. That is what makes it interesting. Fishing is simple on the surface, but the people who really understand it know there is a lot happening underneath.

That makes it a strong metaphor for business, marketing, learning, and life.

You study the conditions. You choose the right approach. You keep adjusting until something hits.

Buzzard Roost Daily Cast

Website: <https://buzzard-roost-daily-cast-v2.pages.dev/>

Status: Game concept prototype

Buzzard Roost Daily Cast is a fishing game concept built around quick daily play, simple fun, and repeat engagement.

The vision is a mobile-friendly fishing experience where players can come back each day for a quick cast, a new challenge, a leaderboard, a better catch, or a shot at bragging rights. It is meant to feel light, addictive, and easy to jump into, especially for people who already love fishing culture.

The bigger idea is that this could become more than a game. It could also become a marketing engine for fishing brands, local tournaments, bait shops, tourism, coupons, promotions, and seasonal campaigns.

A good fishing game does not need to be complicated. It needs to feel rewarding.

Cast. Catch. Compare. Come back tomorrow.

JohnSuchJr.com

Website: <https://www.johnsuchjr.com>

Status: Personal site in development

JohnSuchJr.com is my personal home base.

It is where technology, AI, marketing, creativity, history, future thinking, personal projects, and random useful ideas can all live under one roof. It is not meant to be a stiff resume site or a polished shrine to myself. Nobody needs that.

The goal is more like a digital campfire.

A place to collect thoughts, projects, lessons, experiments, creative work, practical advice, and the occasional rabbit hole worth exploring. One day it might be about AI and the future of work. Another day it might be about building a website, launching a small business idea, creating a game, writing a story, or figuring out why a Renaissance faire still feels more alive than half the internet.

This site is the hub for the things I am building and the ideas I am chasing.

Part portfolio. Part notebook. Part workshop. Part signal fire.

More Coming

I tend to have more ideas than time, which is both a blessing and a character flaw.

Some projects will evolve. Some will stall. Some will turn into something completely different than originally planned. That is part of the process.

The point is to keep building, keep learning, and keep finding the useful thing hidden inside the weird idea.

If something here catches your attention, check it out.

There is a good chance it is still growing.
